RSTG Annual
Conference
2026
14TH - 15TH MAY | WHITE'S HOTEL, CO. WEXFORD

Session : 3 Transport Sectoral Adaptation Plan T-SAP II & Implications for Regional Local Roads

Contents

- T-SAP II Overview & Context
- Process & Methodology
- Priority Risk & Impact
- Action Co-Development
- Governance & Monitoring

1. T-SAP II Overview & Context

An Roinn Iompair
Department of Transport

RSTG Annual
Conference
2026
14TH - 15TH MAY | WHITE'S HOTEL, CO. WEXFORD

The Draft Plan – At a Glance

- ❑ **Revised adaptation objectives** that align to the NAF vision, guiding principles and themes.
- ❑ **Assessment of extreme weather impacts** ‘likely’ 4.5RCP and ‘worst-case’ 8.5RCP IPCC scenarios projected over 2030, 2050 and 2100 timeframes
- ❑ **49 priority risks** identified across all transport modes and climate hazards, from a long list of 114.
- ❑ **40 ‘smart’ actions** co-developed with transport stakeholders.
- ❑ **Including 14 cross-cutting actions** including, capacity building, financing, NbS, and just resilience.
- ❑ Implementation supported by **13 high-level KPIs**, and proposed **adaptation champions** within each transport sub-sector.
- ❑ **Incorporates feedback** from the CCAC, EPA on environmental requirements, and the public.

Adaptation Planning Context - What's New?

More Severe Climate Impacts:

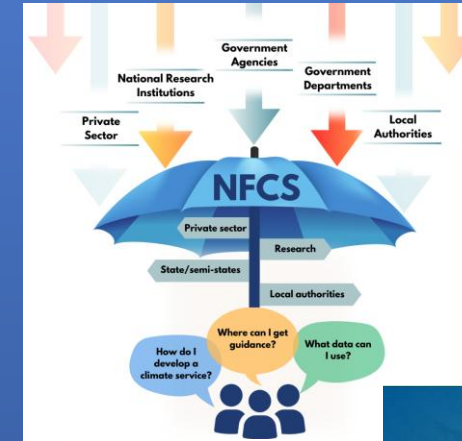

- National Framework for Climate Services
- Met Eireann – TRANSLATE
- National Climate Change Risk Assessment
- Risk Assessment and Action Co-Development across 7 transport sub-sectors~ Road, Bus, Active Travel, Heavy Rail, Light Rail, Aviation, Maritime.
- Case Studies of recent extreme weather events impacting transport

Evolving Policy and Legislation:

- National Adaptation Framework (2024)
- Sectoral Planning Guidance – Approach and Methodology
- EU Adaptation Strategy, EUCRA, and EU CER Directive
- EU Strategic Environmental Assessment & EU Habitats Directives

Growing need for transport infrastructure and services:

- Transport demand growth, macro-economic trends and population growth
- Expansion of public transport, active travel and electrification
- State of climate change adaptation readiness Pilot Monitoring Reporting Evaluation and Learning Framework (2023-25)

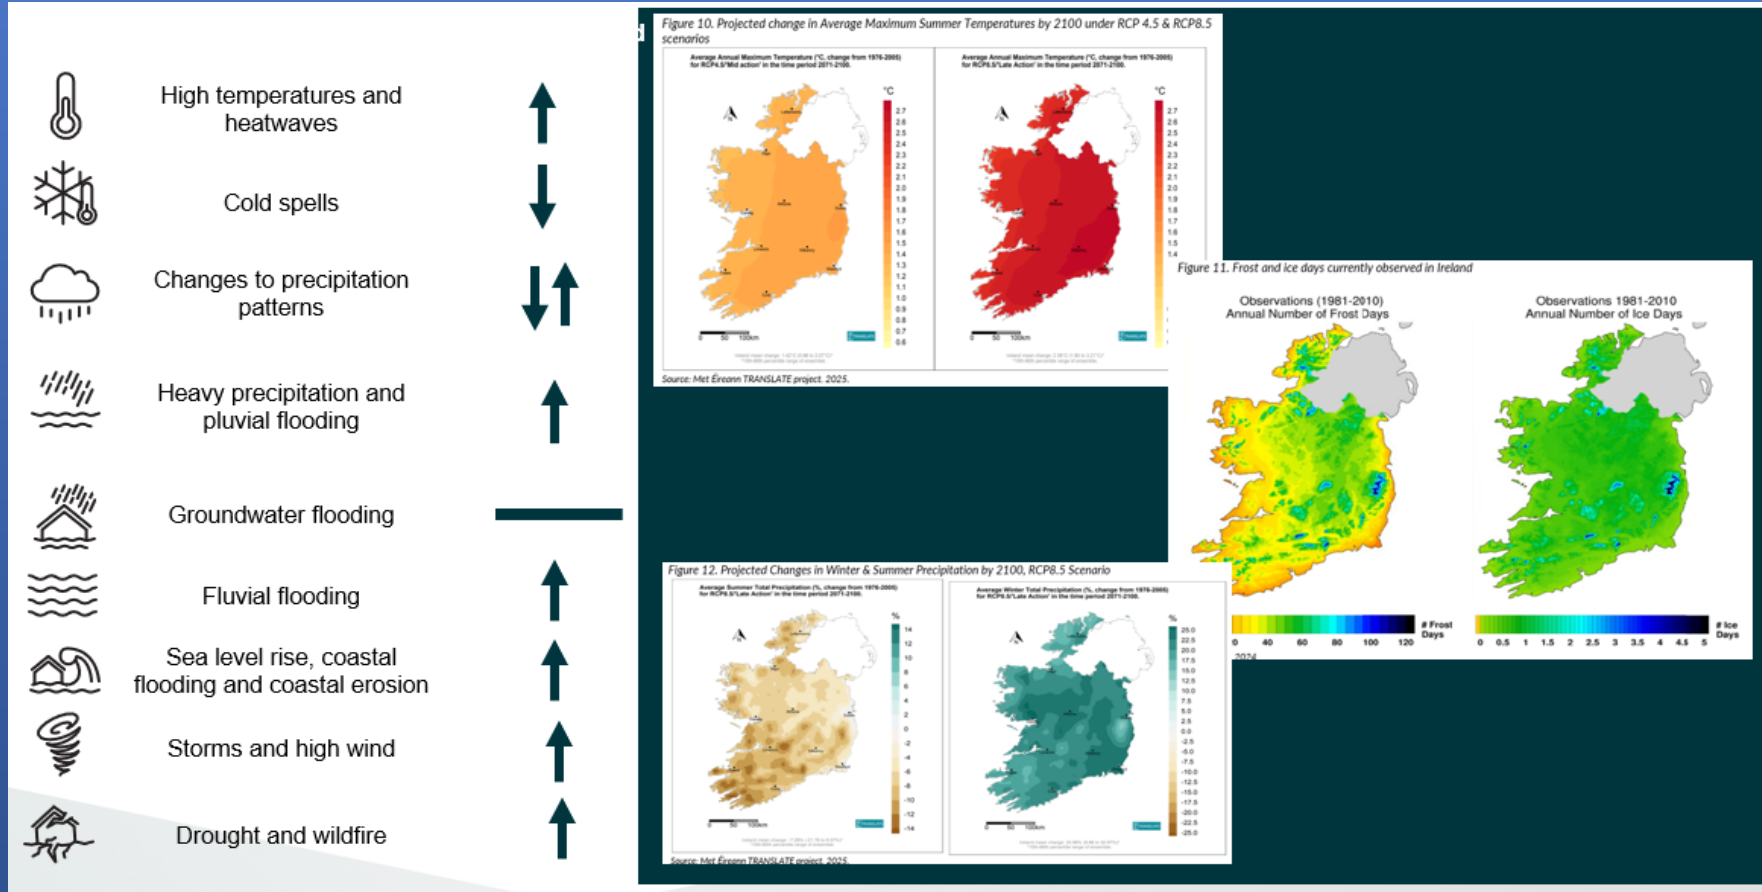

Rialtas na hÉireann
Government of Ireland

National Adaptation Framework
Planning for a Climate Resilient
Ireland
2024

Climate trends in Ireland under different scenarios

A Transport Network Perspective

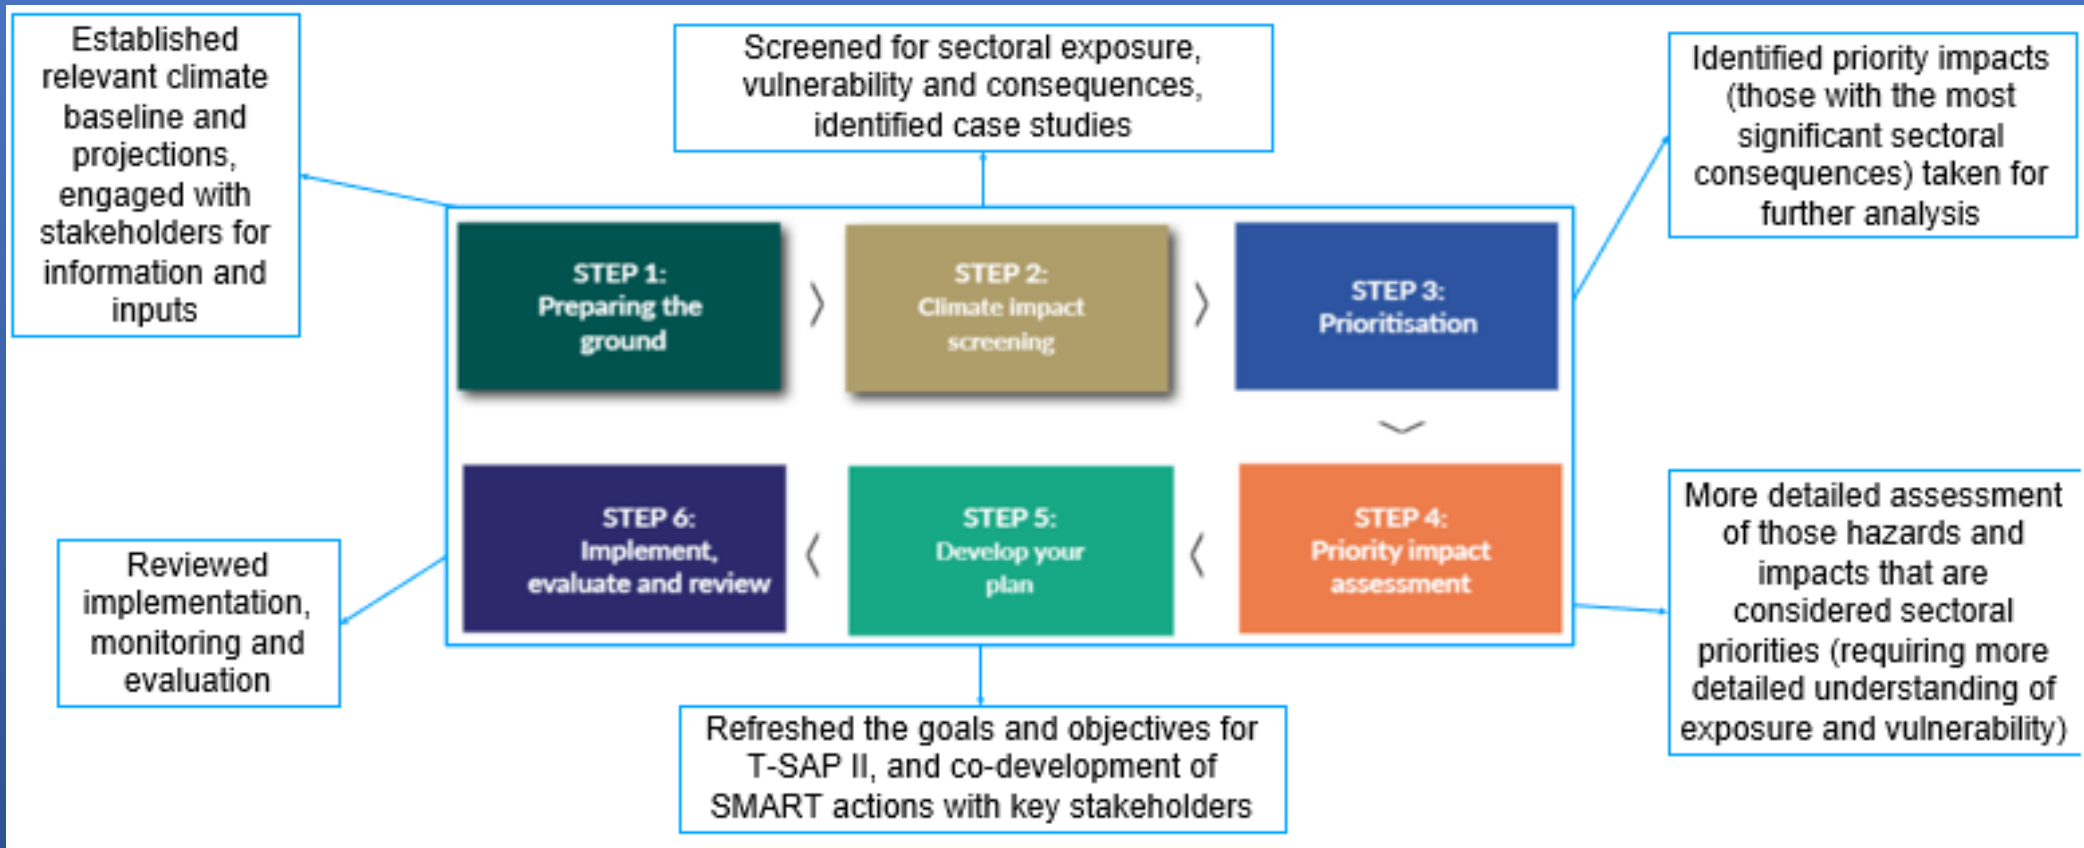

Roads	Active Travel	Buses	Heavy rail	Light rail	Aviation	Maritime
						
High-level summary: Current state of the network						
<ul style="list-style-type: none"> National primary roads are generally well-maintained Regional and local roads vary in condition geographically, generally poor 	<ul style="list-style-type: none"> Expanding network primarily in urban and suburban areas Limited facilities in rural regions Condition varies significantly between counties 	<ul style="list-style-type: none"> Offers extensive coverage serving both urban and rural areas Common operational challenges include traffic congestion, capacity constraints and service performance 	<ul style="list-style-type: none"> Mostly single-track limiting service frequency and creates coverage gaps Parts of the network are highly vulnerable to extreme weather events The lack of redundancy results in high dependency on bus replacements 	<ul style="list-style-type: none"> Fully electrified and relatively new network Most assets in generally good condition 	<ul style="list-style-type: none"> Extensive network to the rest of the world Well developed and maintained but the condition of assets varies between State and Regional airports Lack of rail connectivity 	<ul style="list-style-type: none"> Critical - 90% of Ireland's traded good transported through port network Encounter location-specific challenges i.e. accessibility, environmental constraints Dredging is a common challenge

2. Process & Methodology

The table is a complex grid with approximately 15 columns and 10 rows. The right side of the grid is filled with a heatmap of colored cells (red, green, yellow). Handwritten notes in blue ink are present in several cells, including "Let's give priority" and "Load Capacity to transport".

Sectoral Planning Guidelines

Risk Assessment to Action Development

**Workshop #1 –
Validation of
Impact
prioritisation**

**Priority impact
assessment**

Outputs:

- Identified key risks to prioritise in the risk assessment for each transport subsector
- Provided insights for the risk assessment ratings

Sources:

- Transport sub-sector maps
- Climate maps based on Met Éireann climate data

RISK IDENTIFICATION								
Risk ID	Chronic/Acute	Climate variable	Primary region affected	Other regions with significant exposure	Subsector	Primary asset category affected	Other assets affected	Impact statement
Add number	Determine whether chronic or acute climate change impacts—or both—need to be assessed. Are there specific scenarios where chronic climate change is the primary driver of this impact, or does it result solely from acute climate events?	Select from dropdown menu	List the main primary regions affected	Type the list of regions Border Midlands West Dublin Mid-West South-West South-East	Select from dropdown menu	Select from dropdown menu	Type from list	Select impact prioritisation sheet *Medium/high and High rated impacts, including impact that have significant cascading impacts, or selected based the validation during the workshop

A score from 1 to 5 has been allocated in accordance with various criteria for exposure, vulnerability and criticality. Workshop discussions and evidence from past events informed these scores.

Exposure

- Intensity
- Frequency
- Duration

Vulnerability

- Sensitivity
- Asset management
- Adaptive capacity

Criticality

- Asset damage
- Disruption duration
- Health and safety

Risk ratings assigned based on likelihood and consequence set out in risk matrix.

Initial risk ratings

- RCP 4.5 & RCP 8.5 for 2030, 2050 & 2100

**Confirm priority
climate impacts**

**Undertake more
detailed climate
risk assessment**

**Confirm risk
assessment findings
in second workshop**

**Action co-
development with
stakeholders x 4
workshops**

3. Priority Risk & Impact

Session : 3 Transport Sectoral Adaptation Plan T-SAP II & Implications for Regional Local Roads

Session : 3 Transport Sectoral Adaptation Plan T-SAP II & Implications for Regional Local Roads

Climate hazard	Prioritised impact on roads	Risk Ratings					
		Short Term (Year 2030)		Mid-Term (Year 2050)		Long Term (Year 2100)	
		RCP4.5	RCP8.5	RCP4.5	RCP8.5	RCP4.5	RCP8.5
Changes in precipitation patterns and pluvial flooding	Prolonged and frequent rainfall events can saturate the soil, reducing its shear strength and cohesion. This increased water content weakens slope stability, elevating the risk of landslides, particularly in areas with steep gradients or loose, unconsolidated materials.	Medium	Medium	Medium	High	High	High
	Prolonged and frequent rainfall events can overwhelm drainage systems and lead to flooding of surface water and standing water.	High	High	High	High	Very high	Very high
	Changing precipitation where it decreases in summer and increases in winter could lead to greater seasonal variability in groundwater levels. Where there is sustained rainfall over a prolonged period, this can result in groundwater flooding with waterlogging on the road.	High	High	High	High	High	High
Fluvial flooding	Fluvial flooding can cause the inundation of roads and underpasses, leading to submersion and washouts that render them impassable.	High	High	High	Very high	Very high	Very high
	During heavy or prolonged rainfall events, rivers can experience increased flows, which could lead to fluvial flooding. The fast-flowing water can erode sediment around the piers and abutments of bridges, making them unstable.	Very high	Very high	Very high	Very high	Very high	Very high
Storms and high winds	Strong winds and stormy conditions can result in roadside trees/vegetation falling over and in debris blocking roads.	High	High	High	High	High	High
Cold spells	Cold spells can cause freeze-thaw action on roads which will result in damage to the road subgrade and subbase. This can then make roads hazardous to road users.	High	High	High	High	Medium	Medium
Drought	dry spells and drought can result in settlement damage to roads through peatland areas. This can result in necessary maintenance and repair activities, which may cause disruption and delays to road users.	Medium	Medium	Medium	High	High	High
Coastal flooding and coastal erosion	Sea level rise can accelerate the rate of coastal erosion, which can result in roads collapsing or being washed away.	Very high	Very high	Very high	Very high	Very high	Very high

Session : 3 Transport Sectoral Adaptation Plan T-SAP II & Implications for Regional Local Roads

Cascading Risks & Impacts

4. Action Co-Development

T-SAP II Goals and Objectives

Adaptation Goal:

“The overarching goal of T-SAP II is building long-term resilience across all transport modes in Ireland by adapting to current and future climate conditions to minimise negative impacts on transport services and infrastructure and reduce their consequences. This will enable the transport sector to continue fulfilling its economic, social and environmental objectives.”

Objectives:

1. Support capacity building across all transport modes to develop resilience to potential climate impacts on transport infrastructure and close outstanding knowledge gaps;
2. Enable transport stakeholders to act upon their organisational adaptation priorities and embed climate resilience into their asset management processes;
3. Ensure that resilience to weather extremes and longer-term adaptation needs are taken into account in investment programmes for asset management of existing, as well as planned future transport infrastructure.

An Roinn Iompair | Department of Transport

T-SAP II Actions

- ❑ **Aligned to the Plan objectives** and developed across **5 themes**
 - Legislative, Regulatory or Policy Change
 - Nature-Based Solutions
 - Behaviour/Organisational Change
 - Technical Solutions
 - Adaptation Financing
- ❑ All Actions screened against relevance for **just resilience, nature-based solutions, and maladaptation; Mitigation Co-Benefits** were also considered
- ❑ **40 Actions** across transport sub-sectors including **14 cross-cutting actions, including:**
 - Undertake additional research on future projections for key climate hazards
 - Undertake a climate adaptation skills gap analysis and deliver training
 - Map interdependencies between transport modes as they relate to climate resilience
 - Develop an efficient planning route for critical transport infrastructure projects
- ❑ **Lead and supporting roles** assigned, **resources** needed, and **timelines** and **milestones** identified

Session : 3 Transport Sectoral Adaptation Plan T-SAP II & Implications for Regional Local Roads

T-SAP II Road Actions

ID	Action	Key objective supported	Theme	Additional resources needed	Responsible entity	Supporting stakeholders	Timeline for completion	JR	NbS	MD
R1	Propose new funding schemes for climate-proofing roads in Ireland	Objective 3	Adaptation financing	Required	Department of Transport (RLRD, NRGAT)	CAROs, TII, LAs, NTA	Q4 2027	✓		
R2	Improve data collection and sharing on road infrastructure and climate hazards	Objective 2	Technical solutions	Required	Department of Transport (RLRD, NRGAT)	CAROs, TII, LAs	Q4 2027	✓		
R3	Continue to implement the existing climate adaptation strategy for roads	Objective 2	Behaviour / organisational change	Required	Department of Transport (RLRD), Transport Infrastructure Ireland	CAROs, LAs	Continuous - based on 5-year cycle – Q4 2030		✓	✓
R4	Streamline the request for financial resources to TII and Local Authorities in the aftermath of extreme weather events	Objective 3	Behaviour / organisational change	Not required	Department of Transport (RLRD)	LAs, RMO, TII	Q1 2028	✓		
R5	In addition to existing coordination, develop sectoral response guidelines to coordinate during extreme weather events	Objective 1	Behaviour / organisational change	Not required	Department of Transport (CARE)	TII, DoT (EPD), LAs, CCMA, LGMA	Q2 2028	✓		
R6	Enhance collaboration between the National Transport Authority, local authorities, bus operators and Transport Infrastructure Ireland on climate-proofing urban roads	Objective 2	Technical solution	Not required	National Transport Authority	DoT, LAs, TII, Bus operators, DHLGH	Q1 2027	✓	✓	✓

Action Implementation – Next Steps

- ❑ 40 Actions under TSAP II across 7 Modes and ‘Cross Sectoral’
- ❑ Establish a Baseline Reporting Framework:
 - Step 1 - Confirm milestones and breakdown to tasks level and key deliverables
 - Step 2 - Assign task owners, estimated start-finish times and dependencies
- ❑ Kick-off meetings held with all Sectoral Action Holders - ‘Action Breakdown’ for all ‘Sectoral’ Actions
- ❑ Quarterly meetings with Champions – Action Breakdowns as Framework
- ❑ T-SAP II Action Log and Dashboard for internal reporting, aligning with CAP reporting framework

Session : 3 Transport Sectoral Adaptation Plan T-SAP II & Implications for Regional Local Roads

5. Governance & Monitoring

Session : 3 Transport Sectoral Adaptation Plan T-SAP II & Implications for Regional Local Roads

Governance

- ❑ LACAPs - independently elected local government – annual report
- ❑ SAPs are implemented & reported on to Sectoral Ministers
- ❑ National Adaptation Steering Committee (meets quarterly)
- ❑ Task Force on Adaptation - barriers & crosscutting issues
- ❑ Climate Change Advisory Council – Annual Report & Scorecard

Figure 21. T-SAP II Governance Structure

Session : 3 Transport Sectoral Adaptation Plan T-SAP II & Implications for Regional Local Roads

Monitoring Reporting Evaluation & Learning

Support better planning
and decision making

Support learning
and Exchange

Provide accountability to
funders and citizens

Gather information
for reporting

Session : 3 Transport Sectoral Adaptation Plan T-SAP II & Implications for Regional Local Roads

Core Resilience Indicators

Objective 2: Enable transport stakeholders to act upon their organisational adaptation priorities and embed climate resilience into their asset management processes

Indicator	Description	Related actions
6. Average service recovery time for critical routes or nationally important infrastructure during extreme weather events (in hours)	This indicator aims to provide an insight into how long it takes, on average, for a critical route to become operational after a flood, or storm, or another extreme weather event. The indicator is not intended to be used for comparative purposes, but to set a baseline.	Multiple actions (indirectly)

Objective 1: Support capacity building across all transport modes to develop resilience to potential climate impacts on transport infrastructure and close outstanding knowledge gaps

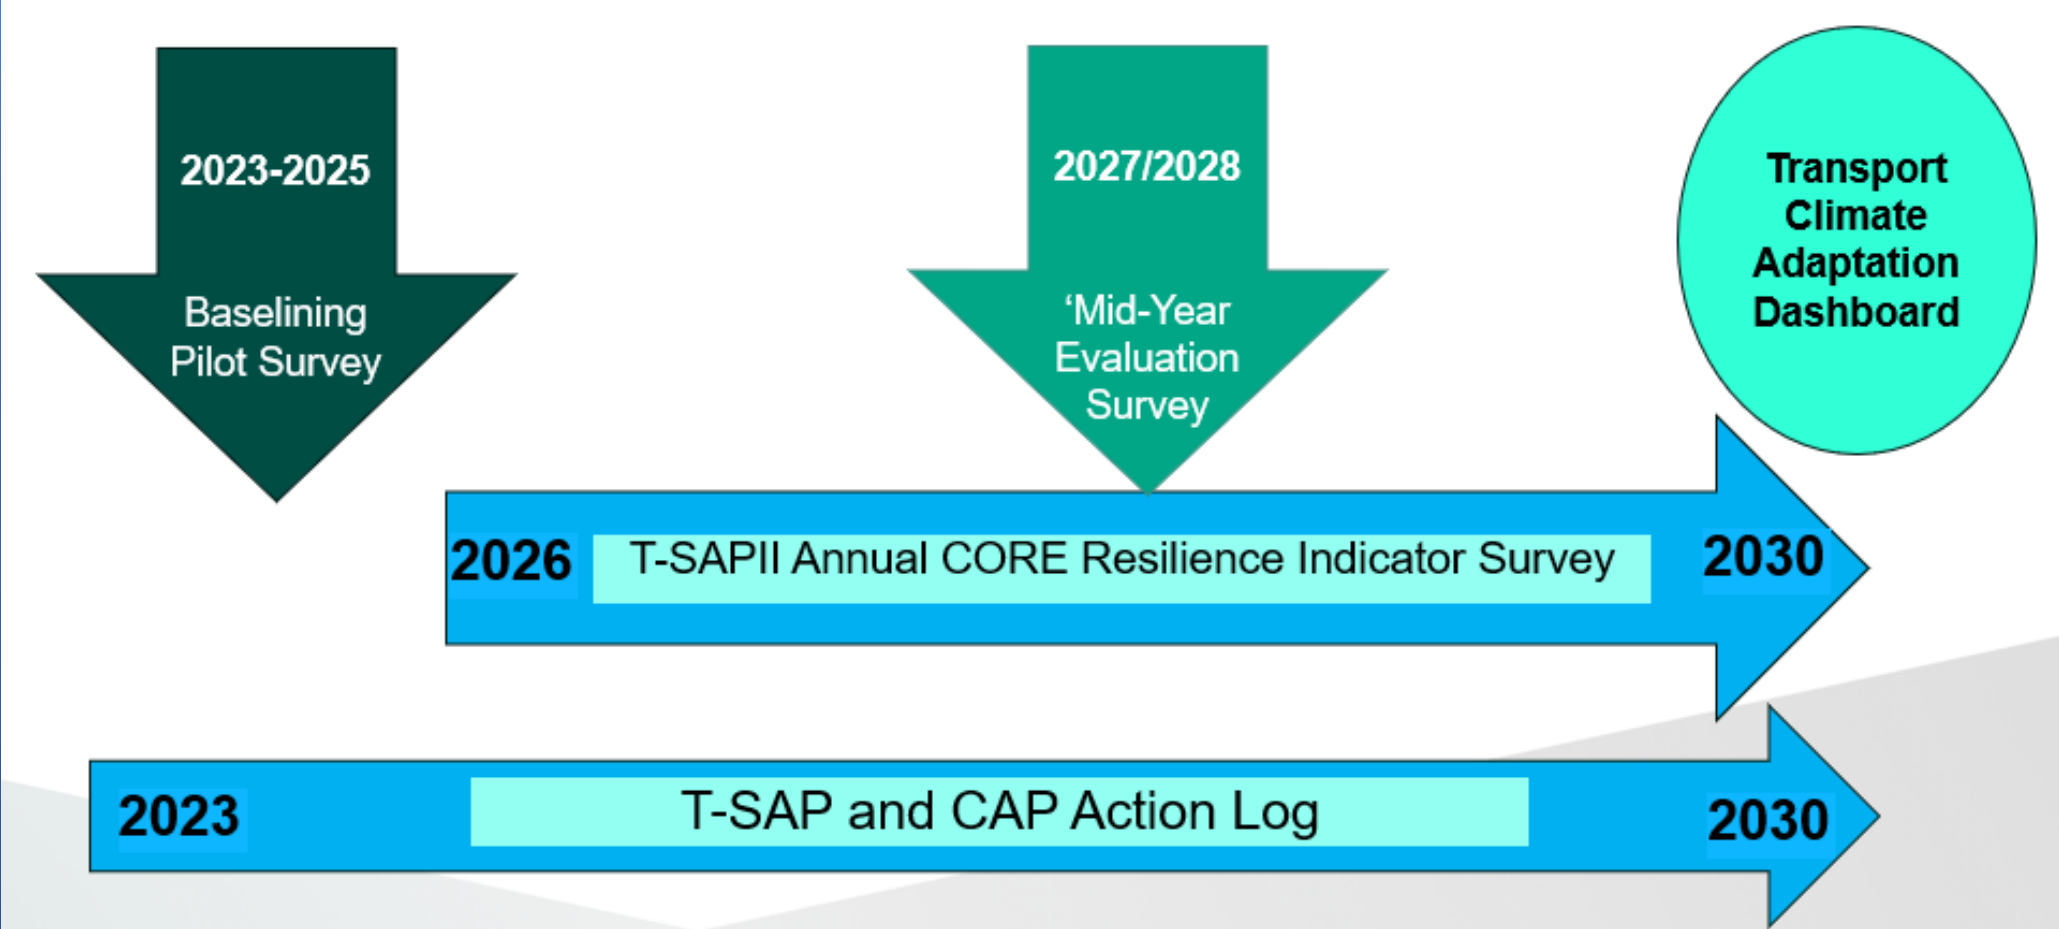

Indicator	Description	Related actions
1. A) Number of trainings / awareness raising programmes related to climate risk and resilience per transport entity delivered, per year	This indicator shows progress on climate-related capacity-building within different transport stakeholder organisations. DoT could consider target setting (e.g. minimum of 20 people per organisation reached in 2026).	CS1, CS3, B1, HR3, P2
B) Total number of staff attending training / awareness raising programmes, per year		

Objective 3: Ensure that resilience to weather extremes and longer-term adaptation needs are taken into account in investment programmes for asset management of existing, as well as planned future transport infrastructure.

Indicator	Description	Related actions
11. A) Estimate of damage to transport infrastructure per event, per transport mode, per year (in EUR) B) Estimate of economic losses due to journey cancellations and delays, per event, per transport mode, per year (in EUR)	This indicator aims to quantify damage to infrastructure and economic losses caused by different climate hazards and how this figure has changed over years.	CS6
12. Percentage of overall organisational investment plan dedicated to climate adaptation and resilience, per organisation	The indicator provides an insight into how much of organisational investment plans consider climate adaptation, and how this figure is changing over investment cycles.	Multiple actions (indirectly)
